### PRESS RELEASE

#### Winter monitoring

In this period the **winter monitoring of bats** is an ongoing activity. In the frame of this are carried out the followings:

- Checking the presence of ringed bats in their winter shelters, in this way we obtain information on bats fidelity to shelters, population dynamics and social behaviour,
- Checking bat colonies in the 15 closed caves,
- Checking bats in artificial roosts installed in 2012 in areas where their natural roost have been destroyed: forests, parks and anthropic areas,
- Checking the bat colonies in caves where concrete conservation actions have been made (like: modification of artificial illumination, cleaning from waste, modifying the visitor routes.)

This activity is carried out in the frame of the project “**Bat conservation in Pădurea Craiului, Bihor and Trascău Mountains**”, LIFE+ Nature and Biodiversity, co-financed by the Life Programme of the European Union.

More information on this project are available on [www.batlife.ro](http://www.batlife.ro)
